

Safety, Health and Environment for Construction Workers

Every worker needs an understanding of their safety and health responsibilities

 Training and Skills™

IOSH's globally-delivered, one-day, face-to-face *Safety, Health and Environment for Construction Workers* course provides essential knowledge for anyone who is involved in construction activities. It's suitable for any geographical location and for any size of organisation.

Who is *Safety, Health and Environment for Construction Workers* for?

It's very much focused on helping delegates to understand what they need to know, and how they can benefit from working in a healthier and safer way. The course provides workers with the knowledge that they'll be able to use in their day-to-day roles. The course can be customised to suit either a cohort of workers from a single company or construction workers from a range of organisations.

The innovative course is woven around a single scenario and case study which is developed at each stage of the course, giving delegates the opportunity to put their acquired skills into practice in the training room.

Understanding legislation, policy and practice in a given territory is crucial for any construction manager. Therefore we have ensured that the section on legislation can be tailored to local contexts. It sets out a global standard, with underlying principles on good practice. With this, delegates can be confident they are taught to the same high standards, whatever the location.

Unlike other construction courses, completion of *Safety, Health and Environment for Construction Workers* means that there is no need to sit any additional environment courses – it's a one-stop shop.

Safety, Health and Environment for Construction Workers covers:

- health and safety issues to be managed in the construction industry to protect employees, contractors, neighbours and others
- the basics of local law
- the importance of risk assessments and method statements and the development process.
- site requirements for the welfare of construction workers on site
- hazards and controls associated with construction sites and activities including working at height and confined spaces
- site environmental management including management of waste and ecology.

Delegates will be able to demonstrate understanding of the course syllabus by taking an end-of-course exam. On successful completion of the exam, delegates will receive an IOSH certificate.

Criteria

To be eligible to deliver the course, trainers must:

- have two years' construction experience OR a level 3 sector specific qualification
- be a Technical member of IOSH
- have up-to-date CPD
- have an adult training qualification at level 3 on a regulated qualifications framework OR have successfully completed the IOSH *Train the Trainer* course
- have two years' substantial face-to-face training experience.

What will employers get?

- globally-recognised and respected certificated training for their workers
- peace of mind offered by training that's designed and quality-assured by the Chartered body for safety and health professionals
- a course that can be delivered in time-slots that suit the business
- fewer hours lost due to sickness and accidents, resulting in greater productivity
- improved, company-wide safety awareness culture and appreciation for safety measures
- proactive staff involvement to improve the workplace
- enhanced reputation within the supply chain.

The product includes:

- access to an online platform which enables trainers to deliver the face-to-face course to delegates
- a digital set of trainer notes
- a digital bank of assessment and marking papers.

Safety, Health and Environment for Construction Workers is delivered by IOSH's network of approved training providers.
